

Thank you for choosing idbasolutions.  
idbasolutions.com

### **idbasol System requirements**

Windows XP or Windows 7. With at least 1GB of physical memory.

**Size on Disk:** Around 180 MB.

**Memory:** At least 220 MB of free physical memory. 120 MB for the Light version.

If you decide to run multiple instances of idbasolutions then each running instance will require 220 MB of free physical memory. 120 MB for the Light version.  
This software currently can only be installed into c:\ drive.

You can only install one physical location of idbasolutions (c:\idbasol) from which you can startup several instances of idbasolutions connecting to multiple Oracle databases. Each running instance of idbasolutions will allocate around 220 MB of physical memory on your desktop.

### **Why installation file is 115 MB.?**

The good news is that the installation file includes all it needs to extract and ready to run, no need to worry about your java installation, version and path and environment setting. The installation file includes all java libraries, classes and Oracle ADF needed to run idbasolutions, this causes the installation file to be as large as 115 MB.

### **Database grants requirements for idbasol**

We recommend creating a new user which you will use to run idbasolutions against your target database.

Unless you are running the demo or light version, failure to execute all steps outlined in **Database And System Requirements** will cause idbasolutions startup to fail.
